Why save seeds and share?

- Many older varieties are no longer available commercially.
- You can try a new plant without expense.
- Find a good home for part-used packets of seed!
- You can be sure that a saved-seed plant can be grown successfully on our soil.

Please consider growing a few of these plants in a place where they can be allowed to stand and set seed, collecting some seed and giving back to SS&S.

See CHADAHS website for information on seed saving, including methods, best storage, how long different seeds stay viable, which F1 varieties can be collected etc.

This seed packet is available for you to print.
